pdfViewer

A small, fast PDF viewer that runs entirely in your browser.

This file ships with the app so there is always something to try. Everything here is real PDF content: text you can select and search, an outline in the sidebar, links that jump around the document, and a landscape page at the end.

Use the arrow keys or the toolbar to move between pages. Open the sidebar for page thumbnails, the outline, and search.

Contents

2 Getting around

3 Searching

4 Links

5 A landscape page

2

Getting around

Left / Right arrow	Previous / next page
Home / End	First / last page
Ctrl + / Ctrl -	Zoom in / out
Ctrl 0	Reset zoom
Ctrl + mouse wheel	Zoom with a mouse or trackpad
Ctrl F	Search the document
Ctrl O	Open another file

On a Mac, use Cmd instead of Ctrl.

The zoom menu has three automatic modes. Auto picks a comfortable size, Fit width fills the window from side to side, and Fit page shows a whole page at once. The button with two stacked pages switches between continuous scrolling and one page at a time.

3

Searching

Press Ctrl F, type a word, and press Enter. Every match is highlighted, the sidebar lists the pages they are on, and Enter keeps jumping to the next one. Try it with the word lighthouse, which appears several times below.

> The lighthouse stood at the end of a long stone pier. Every evening the keeper climbed the stairs, wound the clockwork, and lit the lamp. Ships far out at sea watched for the lighthouse long before they could see the coast, and counted its flashes to know which harbour they had found. When the new electric lighthouse was built further along the shore, the old one was left standing, and on clear nights people still walk out along the pier to look at it.

4

Links

Links inside a document jump to another page:

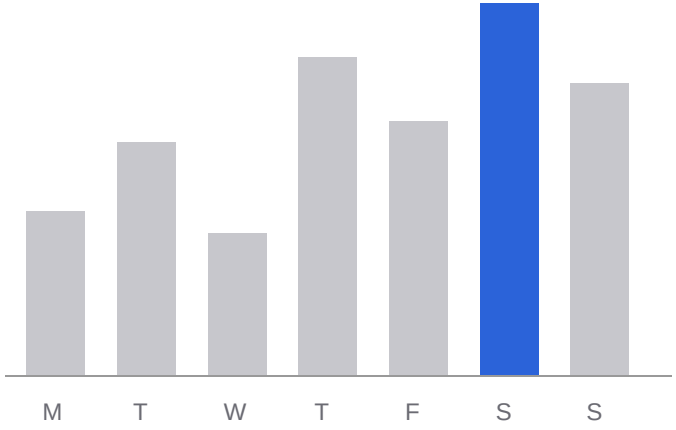
Back to the cover

Links to the web open in a new tab:

github.com/TylerKirk1/pdfViewer

Both kinds are drawn by pdf.js's annotation layer on top of the page, so they stay clickable at any zoom level and survive rotation.

5

A landscape page


Pages in one document can have different sizes and orientations. Choose Fit page in the zoom menu to see all of this one, or rotate everything with the rotate button in the toolbar.
